PC Gaming

Dungeons & Dragons

I am a passionate and aspiring Full Stack Developer, with an affinity for working on the back-end. In my spare time I like to go on long walks, watch HBO TV series and do a little bit of gardening! I have always had a passion for technology, it's what got me started in a career in IT support, I really enjoyed the scripting, automation and problem solving I did as part of the job. This led me to transitioning away from IT Support into Software Development.

PROJECTS

I recently studied full stack software development at iO Academy, during my time there and since I have worked on a range of projects, both as a individual and in a scrum team. Below is a small selection of my favourites, please take a look at my portfolio for the rest.

JavaScript Game
Surfwave Fury
We built a keyboard racing game based on a penguin surfing to a finish line. Using JavaScript for DOM Manipulation and event handling. We designed the game from the ground up. I worked on the highly customised CSS for the game, mainly on the animation and general styling whilst also contributing towards the JavaScript that drove the game.

PHP OOP Listing App
Icepace
We built an Object Orientated PHP Listing app that was designed to look like a late 00's social media site, using PHP to read, update and display data from a MySQL database and used SCSS to style the site. I mainly worked on the PHP applying OOP and SOLID principles, which linked the database to the site and allowed the data to display and be updated / created from forms on the site. I also worked on styling using SCSS. During this project we were pair programming, which I found very enjoyable!

WORK HISTORY

Eunomia Research & Consulting (04.08.2020 - 14.04.2022)
System Administrator
I looked after Eunomia's infrastructure, software and hardware and worked on numerous projects to improve IT within the business. Whilst at Eunomia I hired, managed and mentored a person who took over the service desk to give me more time to focus on project work to improve the IT service.

GL Law (19.06.2018 - 20.03.2020)
IT Service Desk Analyst
I was hired into GL to help with the service desk and free up my then-managers time to focus on project work for the business, during my time here I had my first intro to programming and discovered that I really enjoyed scripting, automation and the problem solving aspect of it, which led to me to where I am today.

SCC (19.12.2016 - 12.06.2018)
IT Onsite Support Engineer

AECOM (19.11.2014 - 19.11.2016)
IT Support Technician

Sainsburys (19.04.2010 - 30.10.2014)
General Assistant

EDUCATION

iO Academy (04.07.2022 - 28.10.2022)
Full Stack Track
I enrolled in the Full Stack Track course at iO Academy the course included the following languages and technologies: PHP, HTML, CSS, SCSS, JavaScript, SQL, NodeJS, React, TypeScript, MongoDB, OOP, MVC, Git.
You can find a link to the **curriculum here**

QA Apprenticeships (02.03.2015 - 03.03.2016)
Advanced Level Apprenticeship in IT, Software, Web & Telecoms Professionals
Merit
I completed my apprenticeship whilst working at AECOM, it provided the skills I would rely on later in my IT support career, whilst also working in a fast paced business environment.

Winterbourne Academy (06.09.2004 - 04.07.2011)
A Levels & GCSES
A-D
